Wearable Cameras Provide New Insight into Lifestyle Behaviors and Health Findings Published in the *American Journal of Preventive Medicine*

San Diego, CA, February 5, 2013 – Understanding the relationships between lifestyle behaviors and health outcomes can be enhanced by the use of wearable cameras, concludes a collection of studies in a special theme issue of the *American Journal of Preventive Medicine*. Three studies report on the latest preventive medicine research using Microsoft's wearable camera, the SenseCam.

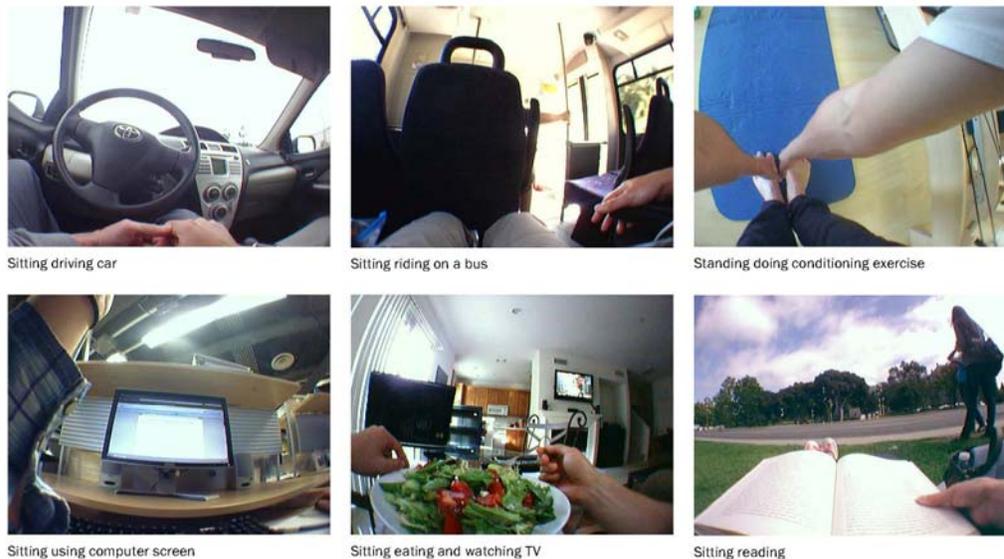

"Wearable cameras and their associated software analysis tools have developed to the point that they now appear well suited to measure sedentary behavior, active travel, and nutrition-related behaviors," says author Aiden R. Doherty, PhD, from the Department of Public Health at the University of Oxford, United Kingdom. "Individuals may recall events more accurately after reviewing images from their wearable cameras, and in addition aspects of their immediate cognitive functioning may also improve."

A paper titled "Using the SenseCam to Improve Classifications of Sedentary Behavior in Free-Living Settings," shows, for example, the advantages of wearable cameras over accelerometers in providing both type and context information about sedentary behavior. Jacqueline Kerr and colleagues found that while TV viewing, other screen use, and administrative activities were correctly classified by

accelerometers, the standing postures are often misclassified as sedentary behavior. Additionally, a nearly 30-minute per day difference was found in sedentary behavior estimates based on the accelerometer versus the SenseCam.

A study by researchers in Ireland analyzes how wearable cameras were employed to improve the recording of dietary intake among jockeys, Gaelic footballers, and physically active college students. The researchers, led by Gillian O'Loughlin of Dublin City University, report that images from the SenseCam provide additional information regarding dietary intake patterns, such as portion size, forgotten foods, leftovers, and brand names. Using wearable cameras also revealed a significant under-reporting of calorie intake, which is a prevalent and critical error of food diaries and self-reporting. Adding wearable cameras to dietary analysis provides a valuable tool not only for athletes and sport populations who closely monitor calorie intake, but may also present dietitians and health providers with the ability to better assess and treat those in need of dietary management.

In a study titled "Benefits of SenseCam Review on Neuropsychological Test Performance," Ana R. Silva and colleagues highlight how wearable cameras can act as a cognitive stimulant in the short term. Compared to re-reading diary entries, Microsoft's SenseCam wearable camera was found to improve autobiographic memory by prompting events reflected in the images, underlining the possibilities for using SenseCam in memory rehabilitation. While future research is still needed, the researchers propose wearable cameras have the potential to reduce the resources required in treating neurodegenerative diseases, such as Alzheimer's.

Another study, "The Smartphone as a Platform for Wearable Cameras in Health Research," recognizes obstacles in the widespread adoption of Microsoft's SenseCam wearable camera, and thus presents smartphones as a viable, and in some cases, enhanced alternative.

An article by Paul Kelly and colleagues identifies and addresses the ethical implications of using wearable cameras in research. Because wearable cameras by nature can be intrusive, a framework for future ethical practice is proposed.

NOTES FOR EDITORS

The following articles appear in the *American Journal of Preventive Medicine*, Volume 44, Issue 3 (March 2013), published by Elsevier.

“Wearable Cameras in Health: The State of the Art and Future Possibilities” by A.R. Doherty, S.E. Hodges, A.C. King, A.F. Smeaton, E. Berry, C.J. Moulin, A. Lindley, P. Kelly, and C. Foster (doi: 10.1016/j.amepre.2012.11.008).

“Using the SenseCam to Improve Classifications of Sedentary Behavior in Free-Living Settings” by J. Kerr, S. J. Marshall, S. Godbole, J. Chen, A. Legge, A.R. Doherty, P. Kelly, M. Oliver, H. M. Badland, and C. Foster (doi: 10.1016/j.amepre.2012.11.004).

“Using a Wearable Camera to Increase the Accuracy of Dietary Analysis” by G. O’Loughlin, S.J. Cullen, A. McGoldrick, S. O’Connor, R. Blain, S. O’Malley, and G.D. Warrington (doi: 10.1016/j.amepre.2012.11.007).

“Benefits of SenseCam Review on Neuropsychological Test Performance” by A R. Silva, S. Pinho, L.M. M. Macedo, and C. J. Moulin (doi: 10.1016/j.amepre.2012.11.005).

“The Smartphone As a Platform for Wearable Cameras in Health Research” by C. Gurrin, Z. Qiu, M. Hughes, N. Caprani, A.R. Doherty, S.E. Hodges, and A.F. Smeaton (doi: 10.1016/j.amepre.2012.11.010).

“An Ethical Framework for Automated, Wearable Cameras in Health Behavior Research” by P. Kelly, S. J. Marshall, H. Badland, J. Kerr, M. Oliver, A.R. Doherty, and C. Foster (doi: 10.1016/j.amepre.2012.11.006).

Full text of the articles is available to credentialed journalists upon request; contact Brianna Lee at 858-534-9407 or eAJPM@ucsd.edu.

ABOUT THE AMERICAN JOURNAL OF PREVENTIVE MEDICINE

The *American Journal of Preventive Medicine* (www.ajpm-online.net) is the official journal of [The American College of Preventive Medicine](http://www.acpm.org) (www.acpm.org) and the [Association for Prevention Teaching and Research](http://www.aptrmweb.org) (www.aptrmweb.org). It publishes articles in the areas of prevention research, teaching, practice and policy. Original research is published on interventions aimed at the prevention of chronic and acute disease and the promotion of individual and community health. The journal features papers that address the primary and secondary prevention of important clinical, behavioral and public health issues such as injury and violence, infectious disease, women's health, smoking, sedentary behaviors and physical activity, nutrition, diabetes, obesity, and alcohol and drug abuse. Papers also address educational initiatives aimed at improving the ability of health professionals to provide effective clinical prevention and public health services. The journal also publishes official policy statements from the two

co-sponsoring organizations, health services research pertinent to prevention and public health, review articles, media reviews, and editorials.

The *American Journal of Preventive Medicine*, with an Impact Factor of 4.044, is ranked 12th out of 157 Public, Environmental and Occupational Health titles and 17th out of 153 General & Internal Medicine titles according to the 2011 Journal Citation Reports® published by Thomson Reuters.

ABOUT ELSEVIER

Elsevier is a world-leading provider of scientific, technical and medical information products and services. The company works in partnership with the global science and health communities to publish more than 2,000 journals, including *The Lancet* (www.thelancet.com) and *Cell* (www.cell.com), and close to 20,000 book titles, including major reference works from Mosby and Saunders. Elsevier's online solutions include ScienceDirect (www.sciencedirect.com), Scopus (www.scopus.com), Reaxys (www.reaxys.com), MD Consult (www.mdconsult.com) and Mosby's Nursing Suite (www.confidenceconnected.com), which enhance the productivity of science and health professionals, and the SciVal suite (www.scival.com) and MEDai's Pinpoint Review (www.medai.com), which help research and health care institutions deliver better outcomes more cost-effectively.

A global business headquartered in Amsterdam, Elsevier (www.elsevier.com) employs 7,000 people worldwide. The company is part of Reed Elsevier Group PLC (www.reedelsevier.com), a world-leading publisher and information provider, which is jointly owned by Reed Elsevier PLC and Reed Elsevier NV. The ticker symbols are REN (Euronext Amsterdam), REL (London Stock Exchange), RUK and ENL (New York Stock Exchange).
